◆ 次の計算を しましょう。

$$(1) \frac{2}{8} + \frac{5}{8} = \frac{7}{8}$$

$$(2) \frac{2}{5} - \frac{1}{5} = \frac{1}{5}$$

$$(3) \frac{1}{5} + \frac{2}{5} = \frac{3}{5}$$

$$(4) \frac{5}{8} - \frac{4}{8} = \frac{1}{8}$$

$$(5) \frac{1}{9} + \frac{7}{9} = \frac{8}{9}$$

$$(6) \frac{8}{9} - \frac{3}{9} = \frac{5}{9}$$

$$(7) \frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

$$(8) \frac{28}{32} - \frac{7}{32} = \frac{21}{32}$$

$$(9) \frac{5}{25} + \frac{5}{25} = \frac{10}{25}$$

$$(10) \frac{56}{73} - \frac{52}{73} = \frac{4}{73}$$

$$(11) \frac{5}{23} + \frac{6}{23} = \frac{11}{23}$$

$$(12) \frac{6}{8} - \frac{2}{8} = \frac{4}{8}$$

$$(13) \frac{5}{72} + \frac{23}{72} = \frac{28}{72}$$

$$(14) \frac{23}{33} - \frac{13}{33} = \frac{10}{33}$$

$$(15) \frac{21}{35} + \frac{6}{35} = \frac{27}{35}$$

$$(16) \frac{39}{64} - \frac{26}{64} = \frac{13}{64}$$

$$(17) \frac{29}{42} + \frac{12}{42} = \frac{41}{42}$$

$$(18) \frac{21}{26} - \frac{6}{26} = \frac{15}{26}$$

$$(19) \frac{2}{17} + \frac{4}{17} = \frac{6}{17}$$

$$(20) \frac{38}{69} - \frac{16}{69} = \frac{22}{69}$$

$$(21) \frac{4}{41} + \frac{2}{41} = \frac{6}{41}$$

$$(22) \frac{26}{48} - \frac{10}{48} = \frac{16}{48}$$
